Hello

I'm Muhammad

Andhika Fahrezzy

UI/UX Designer

2023

Welcome to my **PROFILE**

Active student of the Information Systems undergraduate program in Surabaya, I have a passion in the fields of Data Analysis and UI/UX Design, as well as Corporate Information Systems. I am always eager to learn new skills and refine the skills I already have as a Data Analyst and UI/UX Designer. My goal is to pursue a rewarding career in IT, where I can apply my talents and knowledge as a UI/UX Designer, Data Scientist, or Data Analyst.

Education History

2018 - 2021

High School

SMA Negeri 4 Depok
Science major
87,68/100

2021 - Present

College

Universitas Negeri Surabaya
Information Systems
3.69/4.00

My Skill

Personal

- UI/UX Design
- Editing
- Communicate
- Teamwork
- High Initiative
- Problem Solving
- Analytical Thinking
- Creativity

PROJECT WORK

START

My Projek PT Kanaya Multi Karya

This project is a job that I took at a company, namely PT Kanaya Multi Karya, a company that operates in the car rental sector. There, I had the opportunity to develop my skills and creativity in making designs. I learned many new things, such as how to choose colors, fonts, layouts, and other elements that suit the theme and design goals. I also learned how to optimize designs for the web, so they display well on a variety of devices and browsers.

UI/UX PROJECT

START

My Proyek 1

Unesa Health Care

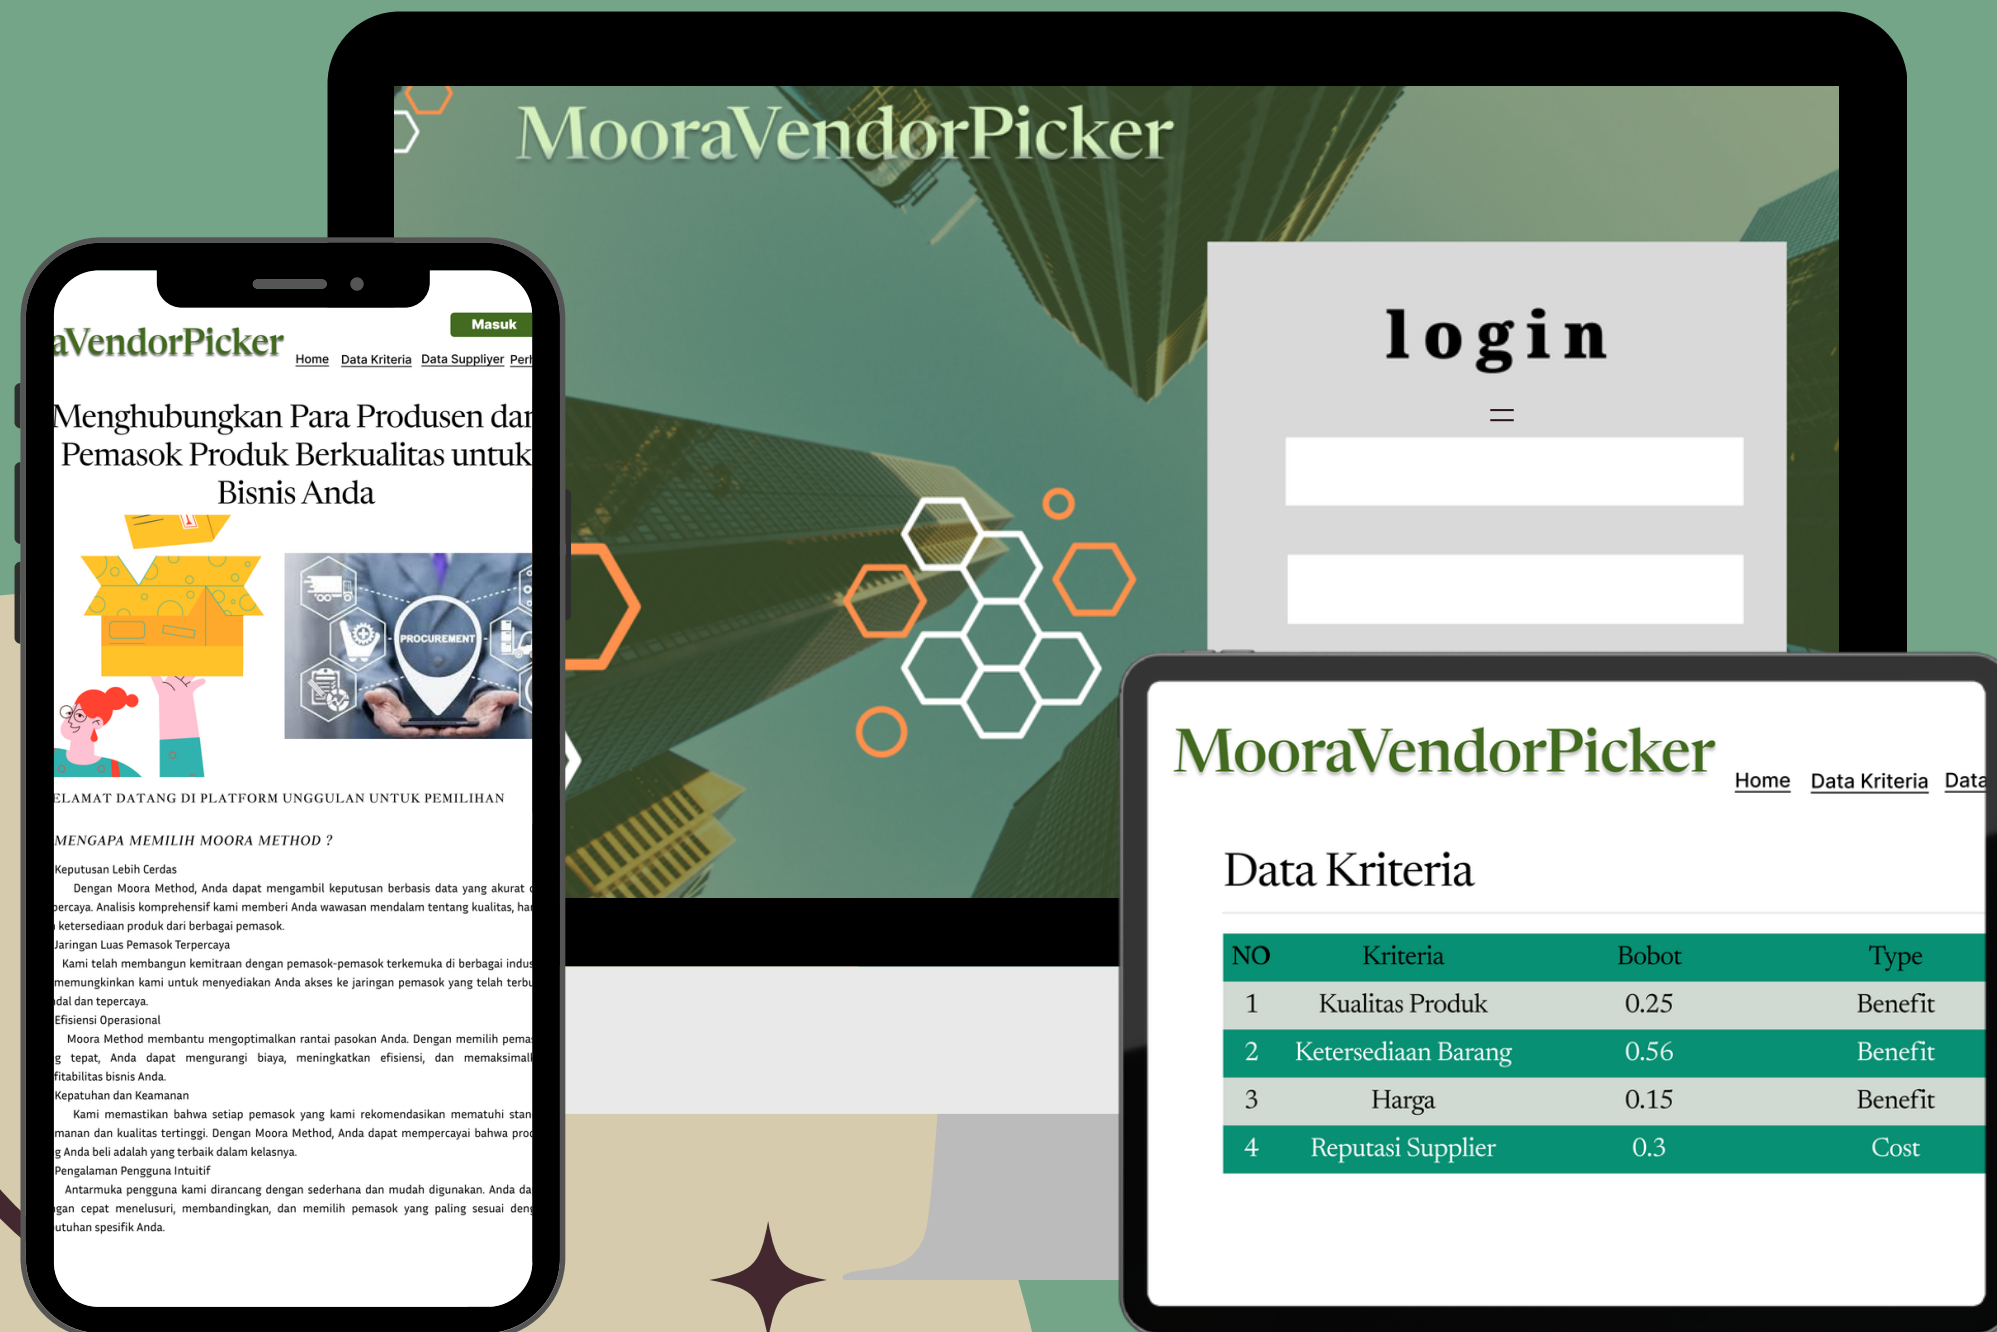

For my Human-Computer Interaction course, I use Figma and WIX.Com to design engaging and user-friendly websites and mobile apps. I explore how to use colors, fonts, and objects to create appealing interfaces.

My Proyek 2

MooraVendorPicker

Decision Support Systems (DSS) are models that present information to solve complex and unstructured problems to support leaders in making quick and correct conclusions. The MOORA method is a multiobjective system method that optimizes two or more conflicting attributes simultaneously. In the Decision Support System, the MOORA method is used to decide which students get assistance using the steps from the MOORA method.

It's interesting that you use Figma to create website and mobile designs. Figma is a very useful tool for creating attractive and responsive designs.

My Proyek 3

Teknopolis

This project is part of the Project Management course that I took in the fifth semester. I was the Designer and created the website and mobile designs using Figma, which were then developed by the Developer. I also designed the documents and photos for the group.

The main goal of this course and project was to learn how to handle a real project from scratch, starting from analysis to launching the website and app publicly.
